

Creating Photobooth Videos for iWeb

For younger students who cannot type their reflections, photobooth movies work well.

1. Open Photobooth from the applications folder or from the dock.
2. Click on the filmstrip icon in the lower left of the bar.
3. Press the video button in the middle of the screen to start filming.

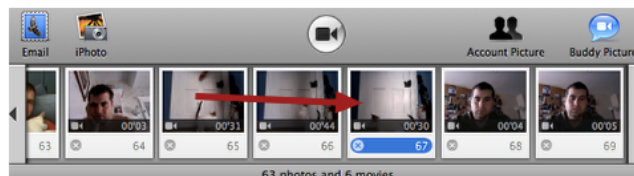

4. **STOP RECORDING WHEN DONE**

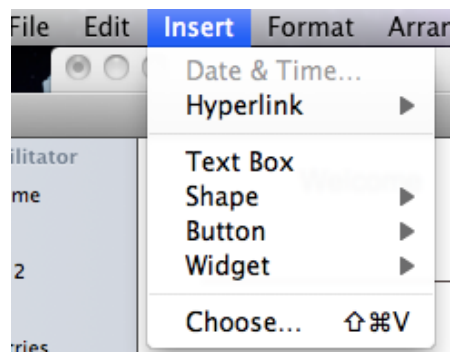

When You've Captured your Video, click the **Stop** button.

5. **SELECT YOUR VIDEO**

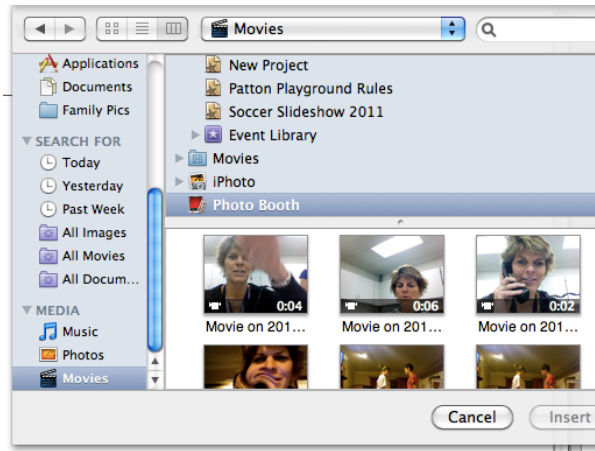

6. Go to your iWeb page and click where you want to add the movie. You can add this movie on a blank, album or movie page.

7. Go to Insert choose

8. In the left column, scroll all the way down and select movies. In the next column select photobooth and you will see all your photobooth movies. Select the one you want and click the Insert button.

9. You can also drag the movie to the desktop from photobooth, click on the movie's text until you get a blue rectangle around it and change the text. You can then drag the movie to the iWeb blank, album or movie page.
